- Remove filters
- Wash filters
- Wipe interior
- Top up chemicals
- Rinse out
- Leave door open
- Inspect wash and rinse arm jets – clean if necessary

### Additional Weekly

- Remove wash arms
- Strip and clean arms
- Wash machine internally with Renovater
- Regenerate water softener (if fitted)

# Glass & Dishwasher

## Hygiene & Maintenance

**Before placing glasses, cups  
or plates into the machine**

### 5 simple steps to follow

**1**

Remove lemon slices  
and cocktail sticks or  
food scraps  
**The machine is not a  
waste disposal unit**

**2**

Manually  
remove lipstick  
**The machine cannot  
do this automatically**

**3**

Discard any drink  
residues into the sink  
**The wash water is only  
refreshed between 10 &  
20% each cycle**

**4**

Do not wash or  
empty ashtrays  
into the machine

**5**

Do not interrupt or  
shorten the wash cycle  
**To effectively clean & dry a full  
cycle is essential**

### **Other tips** for the maintenance of glasses

#### **Renovate ALL glasses bi-monthly**

Invisible detergent residues will damage a beer head.  
Caustic detergents visually damage glasses.

#### **Renovate all new glasses before use**

New glasses are coated in a mould release agent and this will damage a beer.
